TRANSLUCENT MAGAZINES & ACCESSORIES

L5 & L5A 30 Round Translucent Magazine

The L5 is a translucent 30 round magazine developed for the 5.56mm M16/M4/AR15 rifle. It has an impact resistant translucent polymer body, hardened steel feed lips and a removable rubber coated bottom. Robust enough for professional use, the L5 can expedite pre & post operation inspections, increase op-tempo and improve range safety.

The L5 Translucent Magazine has been tested and recommended by the members of the National Tactical Officers Association.

The L5A 30 round magazine was designed to work with the 5.56mm HK416, SA80 and Beretta ARX-160 rifle systems. It has the same impact resistant translucent polymer body, corrosion resistant steel feed lips, constant curve internal geometry and removable, rubber coated bottom as the original L5.

Included in the L5A's design are a number of user recommended changes; the magazine well stop has been replaced with a lower profile support rib. The new rib makes the L5A easier to get out of magazine pouches and allows the magazine to be utilized with the H&K 416, SA80, ARX-160 as well as the AR/M4/M16 weapon systems. The bottom of the magazine's body has been reinforced to improve bottom retention.

L5-20 Round Translucent Magazine

The L5-20's design incorporates the same impact resistant translucent polymer body, hardened steel feed lips and rubber coated bottom found on the original L5. Included in the L5-20's design is a number of user recommended changes; the magazine well stop has been replaced with a lower profile support rib. The new rib makes the L5-20 easier to get out of magazine pouches and allows the magazine to be utilized with the H&K 416.

The L5-20 Translucent Magazine has been tested and recommended by the members of the National Tactical Officers Association.

L5 Competition Translucent Magazine

The L5C was developed for serious 3 Gun and tactical rifle competitive shooters. With a maximum capacity of 48 rounds the L5C can reduce magazine changes during long stages, resulting in quicker times.

Utilizing a precision machined coupler we've combined a standard L5 30 round magazine body with a modified L5 body. The coupler ensures the bodies are accurately aligned, maintaining the internal constant curve geometry, ensuring reliable feeding.

The L5C comes completely assembled and ready for action.

L5-10 & L5-5 Magazines

The L5-10 is based on the proven L5 design; Impact resistant translucent polymer body, hardened steel feed lips and rubber coated bottom. Developed for areas with high capacity restrictions, hunting and general range use, the L5-5 and L5-10 provides a low, less threatening profile while maintaining the high reliability associated with the L5 Translucent Magazines. The L5-5 and L5-10 share the same body, but the L5-5 has a follower that limits the magazine's capacity to 5 rounds making it legal for hunting use in many states.
