LANCER SYSTEMS INTRODUCES A TRANSLUCENT 30 ROUND MAGAZINE FOR M16/M4/AR15 RIFLES

Allentown, PA (January 2008) Lancer Systems LP today announced that they've launched the L5 Translucent Magazine for the M16/M4/AR15 rifle.

The L5 Translucent Magazine was developed to implement improvements recommended by military and law enforcement personnel. Lancer Systems, working with a major small arms manufacturer, applied an engineered translucent polymer, steel feed lips and a removable rubber coated bottom to produce a 30 round translucent magazine that can withstand the rigors of professional use.

Features:

- Made in the USA
- Translucent polymer body that is impact resistant through a wide range of temperatures
- Chemical resistant polymers
- Corrosion resistant steel feed lips that are permanently molded into the body.
- Round Count Markers at 20 and 30 rounds
- Body texture, contour and rubber coated bottom designed to provide positive gripping and improve retrieval from magazine pouches.
- Body design incorporates a constant radius geometry that facilitates follower/spring travel.
- Same design envelop as the USGI aluminum magazine, can be used with existing pouches and carriers.
- Easy to disassemble and maintain

Credible product testing was a critical part of the product development process. A major small arms manufacturer led the testing effort providing critical test data and the vital feedback necessary to ensure the magazines are capable of meeting the rigors of Military and Law Enforcement service.

Lancer Systems is a team of engineers and manufacturing experts that are committed to providing innovative material solutions to the warfighter. Our focus area in the small arms arena is in the application of advanced lightweight materials to decrease weapon system weight and increase operator efficiency.
