LANCER SYSTEMS INTRODUCES THE L5[®] 20ROUND TRANSLUCENT MAGAZINE FOR AR15 RIFLES

Allentown, PA (June 2009) Lancer Systems LP is please to announce the Lancer L5[®] 20 Round Translucent Magazine.

The L5-20's design incorporates the same impact resistant translucent polymer body, hardened steel feed lips and rubber coated bottom found on the original L5[®] magazine. We've also applied a number of user recommended improvements to the body's external design. The upper most support rib has been redesigned making the L5-20 easier to get out of magazine pouches. This change also allows the magazine to be utilized with the H&K 416. In addition, a support rib has been added around the bottom of the magazine's body to improve bottom retention.

Features:

- Made in the USA
- Translucent polymer body that is impact resistant through a wide range of temperatures.
- The L5-20 body design incorporates a constant radius geometry that facilitates follower/spring travel.
- Hardened steel feed lips are permanently molded into the body; feed lips are PTFE coated for corrosion resistance.
- Stainless steel spring
- Rubber coated bottom.
- Easy to disassemble and maintain.

Lancer Systems is a team of engineers and manufacturing experts that are committed to providing innovative material solutions to the warfighter. Our focus area in the small arms arena is in the application of advanced lightweight materials to decrease weapon system weight and increase operator efficiency.
