## **LANCER SYSTEMS IN DEVELOPMENT OF A TRANSLUCENT MAGAZINE FOR COLT DEFENSE**

Kulpsville, PA (March, 2007) Lancer Systems LP today announced that they are developing a next generation translucent magazine for Colt Defense LLC. The new magazine combines Colt's experience in small arms technology with Lancer's material and product design capabilities. The new magazine is designed to allow the visual inspection of the contents of the magazine while providing the operational reliability associated with metal magazines.

Developed from a Lancer proprietary material, the body of the magazine is physically robust and strong through a wide range of temperatures as well as resistant to chemicals typically encountered by the warfighter. The translucent plastic was formulated to have a tint and texture to conceal the reflection of the ammunition while still allowing visual examination of the contents of the magazine. The magazine has also been designed to allow for easy disassembly to facilitate cleaning.

A pre-production quantity of magazines is currently undergoing extensive testing which includes; elevated temperature firing, extreme low temperature firing, impact, drop, chemical compatibility and endurance firing.

Lancer Systems is a world class team of engineering and manufacturing experts that are committed to developing and delivering innovating material solutions for tomorrow's most advanced warfighter systems. Lancer has the capability to design and manufacture elastomers, plastics, composites and optical connectivity products, as well as apply assembly and logistics expertise. Lancer fills the gap between prime contractor and component manufacturer. Our customer-centric philosophy is all about collaborative business relationships, adding value and delivering quality product on time.
